

Automated Content Analysis for Social Science

University of Kentucky, March 9, Wednesday

3:00 pm - 5:00 pm, President's Room, Singletary Center

[Daniel Hopkins](#) (Political Scientist, Georgetown), co-author (with [Gary King](#), Harvard) of a nonparametric method of automated content analysis of digitized text. Article is linked [here](#).

Digitized text is everywhere, yet hand coding thousands of blogs, speeches, government records, newspapers, and other sources of unstructured text is infeasible. Professor Hopkins is co-author of a method of automatic content analysis for social scientists. He will illustrate his method with a variety of data sets, and make the software available for easy use.

(Co-sponsored with the Communications College)

Organized by the Quantitative Initiative for Policy and Social Research (QIPSR)
